

ACS Media Sanitization and Disposal Policy

Policy ID: ACS-POL-MP-001 **Applies to:** All media that stores FCI

Classification. Media must be classified according to the most sensitive information it contains. Contract documents, purchase orders, controlled drawings, and invoices associated with federal work are FCI.

Reuse. Media may be reused only after an approved clear or purge process. File deletion, formatting without validation, and moving files to the recycle bin are not approved sanitization by themselves.

Sanitization. For this training environment, the approved reuse method is: remove the existing partition, create a new NTFS partition, perform a full format, assign the required sanitized volume label, validate that prior files are inaccessible, and complete the sanitization log and certificate.

Destruction. Failed, end-of-life, or non-reusable FCI media must be destroyed by an approved vendor. The organization must retain the asset record, chain of custody, drive serial number, and vendor destruction certificate.

Documentation. Sanitization and disposal records must identify the media, method, operator, date, result, disposition, and supporting certificate or chain-of-custody record.

Decision	Required action
Reuse	Approved sanitization, validation, log, and certificate
Destroy	Chain of custody and approved destruction certificate
Return to inventory	Only after validation that the media is approved and serviceable
